Education

INDIAN INSTITUTE OF INFORMATION TECHNOLOGY BHOPAL

August 2023 – June 2027

Bachelor of Technology in Electronics & Communication Engineering

CGPA: 8.66/10

Relevant Coursework: Data Structures & Algorithms, DBMS, OOPs, Computer Network

Achievements

- 2024 Instructed and mentored 50+ undergraduate students in Electronic Devices and Circuits, facilitating understanding of concepts and lab applications as the teaching assistant.
- 2024 Spearheaded a 5-member team to conceptualize and develop an end-to-end solution, securing 3rd place among 45 teams in O-Sprint 2.0.
- 2024 Led a team of 10+ members as Design Coordinator in the IEEE Student Chapter, organizing 5+ technical events and managing branding, design, and event promotions.
- 2025 Achieved a peak rating of 1850+ on LeetCode with the Knight badge and solved 600+ DSA problems across LeetCode, CodeChef, and other platforms

PROFESSIONAL EXPERIENCE

Raizzify (Remote)

Mar 2026 – May 2026

Full Stack Developer

- Engineered customer-facing workflow enhancements by building **automated WhatsApp communication features**, **fixing 10+ high-impact UI issues**, and streamlining frontend-backend integration to improve application stability and user experience.
- Developed **10+ reusable React components** across **5+ internal pages**, standardizing UI patterns and reducing per-feature frontend setup time

Personal Projects

AI-Powered CI/CD Failure Detection and Log Analysis Platform

Video | Live | GitHub

- Engineered** an AI-powered CI/CD failure detection platform using **Node.js**, **Express.js**, **MongoDB**, **GitHub Actions**, and **LLMs** to automatically analyze pipeline failures from webhook events, processing **1M+ CI/CD log lines/day** and reducing troubleshooting time by **70%**.
- Implemented** intelligent CI/CD log filtering and autonomous root-cause analysis, automatically prioritizing the **Top-5** critical errors to improve debugging efficiency and reduce unnecessary LLM processing.
- Optimized** API latency by **98.3% (349 ms → 6 ms)** using **Redis caching** and reduced **LLM token usage by over 95%** through log filtering and Top-5 error selection.
- Tech Stack:** Node.js, Express.js, MongoDB, Redis, GitHub Actions, REST APIs, Webhooks, Docker, OpenAI/Gemini API, CI/CD.

AI Second Brain | Semantic Search Platform

Video | Live | GitHub

- Launched** an AI-powered Second Brain platform using **React.js**, **Node.js**, **Express.js**, **MongoDB**, and **Pinecone** to semantically index and retrieve knowledge from YouTube and Twitter content, generating **10K+ vector embeddings**.
- Implemented** semantic vector search using **Pinecone** and **Retrieval-Augmented Generation (RAG)** with **Gemini API**, enabling context-aware conversational retrieval from user knowledge.
- Improved** AI inference by reducing **LLM input context by over 99%** through **Top-5 semantic retrieval**, improving response efficiency, semantic search relevance, and reducing unnecessary token processing.
- Tech Stack:** React.js, Node.js, Express.js, MongoDB, Pinecone, Gemini API, Vector Embeddings, Semantic Search, Retrieval-Augmented Generation (RAG), REST APIs.

Skills

Languages: C, C++, Java, JavaScript, TypeScript, SQL

Frameworks and Libraries: React.js, Next.js, Node.js, Express.js, Redux, Tailwind CSS, Socket.IO

Databases and Tools: MongoDB, Mongoose, Redis, MySQL, Git, GitHub, Docker, Postman, VS Code, GitHub Actions

AI & Databases: Semantic Search, Vector Embeddings, Pinecone, Gemini API, Neo4j (Graph Database)

Cloud and Deployment: AWS (S3, EC2, ECR), Vercel, REST APIs, NextAuth, Stripe, JWT, CI/CD Pipelines, Nginx
